## Identifying review questions for future Cochrane reviews on groin and ventral hernia management A meta-epidemiological study

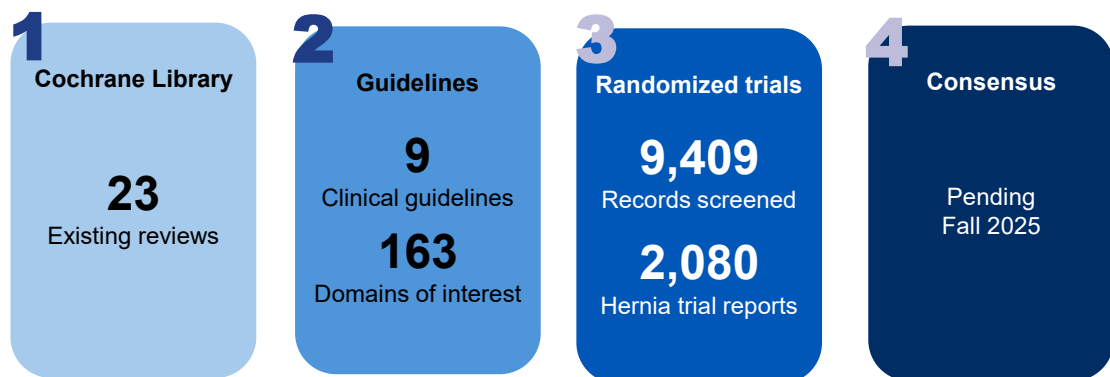

### AIM

To systematically develop a shortlist of review questions addressing critical evidence gaps in groin and ventral hernia surgery intended to form the basis for future Cochrane reviews on hernia management.

### METHODS

### PRELIMINARY RESULTS

### PRELIMINARY CONCLUSION AND FUTURE PERSPECTIVES

We developed a comprehensive longlist of review questions on hernia management. These will now be prioritized by an international stakeholder panel to identify the most clinically relevant topics. These shortlisted review questions will then be recommended for prospective authors of future Cochrane reviews.
